

## i65 Maintainer – *The Charger for Emergency Management*

*i65 Maintainer provides Automatic Maintenance Mode after complete charge to avoid self-discharge issues.*

### Benefits:

- Perfect for Long-term storage
- Tri-Chemistry (NICD, NIMH, Lithium)
- Rapid conditioning charge
- Full Charge NICD / NIMH in 15-40 Minutes!
- Extends battery life
- User-friendly – green light = GO!
- Prevents memory build-up
- Patented DEW™ Technology

With the iCHARGE i65™ Maintainer batteries receive a complete conditioning charge and can be stored on the charger for days, weeks or even months, - the unit maintains these batteries at full charge so they are ready at a moment's notice. These features make this unit the perfect charger for any HAZMAT, SWAT, EMERGENCY MANAGEMENT or any other FIRST RESPONSE TEAM.

After charging completely, batteries left on the unit are individually discharged and recharged, one at a time every two weeks. Each battery is fully exercised and conditioned, which keeps the batteries in an optimal state and ready for your next critical assignment.

If your backup batteries are discharging on the shelf or overcharging on some other charger, switch to the iCHARGE i65 Maintainer and be assured your batteries are always ready to go when you need them ...after all, First Responders don't get a second chance!

ACT's iCHARGE i65 Maintainer is the most intelligent battery conditioning charger available in the industry. Only iCHARGE™ chargers offer patented Dynamic Electrochemical Waveform (DEW™) technology.

***We don't make batteries, we make them better!***

Contact your ACT Technical Representative to find out why ACT's iCHARGE technology should be part of your Emergency Management System.
