

We Make Any Battery Better

Advanced Charger Technology

What Our Customers are Saying

John E. McGuire

Operations Liason
Unified Port District
San Diego (Airport Traffic Control)

"We're happy with the **ACT**ivator. We've tried a bunch of different chargers, and this is the first thing that works. It keeps batteries alive. We've tried everything, even the Motorola conditioner/ charger, and it didn't do anything for our batteries. We tested the **ACT**ivator, and it absolutely amazed at how quickly it brought life back to batteries. A battery will actually last an entire shift. Even after we got the Motorola charger, we thought we were just out of luck with batteries. Batteries had been a very sore subject around here for a long time.

About six months ago, my colleague Bob with Harbor Police and I attended a demonstration of the **ACT**ivator. We had both experienced a lot of radio problems, and decided to give it a shot, like everything else they ask you to try and promise results, like our OEM fast charger. We were shocked that yours worked! We went into it with a very pessimistic view, were VERY surprised that this system works so well.

We got a six-bay **ACT**ivator, which we tested with our sergeants. Within the first two days, they noticed a tremendous difference in batteries. They are on the radio the most, talking to everyone else out there. We're on all hand-held and find that batteries are lasting an entire shift and still had a lot more to go. Before that, the radio would be chirping with a bad battery well before the end of a shift.

We've been using the **ACT**ivator on one particular battery for six months, and that battery performs like it's brand new. It was about two years old before we got the **ACT**ivator, and now it just keeps going." We were very surprised at that. This battery is assigned to one particular radio that is used for two shifts a day, From 6 am to midnight on one charge. We already see that we are getting longer life with the **ACT**ivator.

When we do our new budget, we are going to get several more **ACT**ivators. Instead of paying \$1000 to replace all our batteries every six months, we'll have batteries that will last a whole lot longer.

I'll say it again, we went into this with an attitude of 'Ok, we'll give them their test', not expecting to find anything different than anything else we've tested -- and bought -- with no great satisfaction. But the **ACT**ivator really works! It was a real eye-opener. I absolutely would recommend it. We'll be happy to tell anyone who calls that the **ACT**ivator works great."
